

5 THINGS

EVERY HOMEOWNER SHOULD KNOW ABOUT BASEMENT HEALTH (FALL)

Prep for Rain and Temperature Swings

Cracks Can Signal Structural Trouble

- ✓ Look for new or expanding cracks in walls or floors.
- ✓ Schedule repairs before rains are in the forecast or before the freeze-thaw cycles make them worse.

Drainage Outside Affects

Conditions Inside

- ✓ Ensure gutters are cleaned and downspouts extend away from the home.
- ✓ Check yard grading to make sure water flows away from your foundation.

External inspection

- ✓ Walk around the outside of your home and look for torn caulking between windows and framing/brick veneer. Look for visible cracks in the brick work or foundation
